

4th Year - Premier Dairy Veterinary Externship

September 16-29, 2024

Join our **4th year veterinary student** externship. Our vision is to host 2-3 students during the same 2-week rotation to engage group learning and hone in on your applied dairy skills.

Each extern will select 1 or 2 topics to focus on, and each student will have a small, individualized project to complete. The project will be framed around collaborative problem solving and data collection. While doing this, the extern will work with all of the veterinarians at UVS. Each extern will present their individual project findings in a relaxed, conversational setting near the end of their experience.

Focal topics of the externship may include, but are not limited to reproduction, milk quality, calf and/or heifer management, transition cow health, vaccine protocols, facility design, ventilation, heat abatement, etc. Other topics may be suggested by the accepted extern and approved by the veterinarians at UVS.

Housing is provided.

To apply, please submit a cover letter, resume, and three references (one of which being from a faculty member at a university) to uvs@unitedveterinaryservice.com.
