Dairy Veterinary Summer Internship

We are excited to offer a summer internship program for **veterinary students** in their first or second summer of veterinary school **OR pre-veterinary students who have been accepted into veterinary school**.

The internship will involve a project with the primary goal of providing value to clients. The project will be framed around problem solving through data collection, training, and collaboration to facilitate changes. While doing this, the intern will work with all of the veterinarians at UVS.

Topics of the summer internship project may include, but are not limited to herd health, production medicine, data analysis, youngstock, milk quality, etc. Other topics may be suggested by the accepted intern and approved by the veterinarians at UVS.

The internship will last several weeks (up to 8) but is very flexible. The intern will present their project findings near the end of their experience.

The internship is paid upon completion, and housing is provided.

To apply, please submit a cover letter, resume, three references (one of which being from a faculty member at a university), and your primary goal and intent for participation in the program. Return applications to **uvs@heritage.vet**
